(#) according to that stated by the customer

Bellarla-Igea Marina - Italy, 21 November 2024

Chief Executive Officer

**Description of item[#]**

The item under examination consists of a window with two sashes with the tilt & turn opening typology.

The sashes are joined to each other with an aluminum profile in the middle that has the function of overlap.

The profiles are joined at the corner with the milling and welding process.

The depth of the frame is 76 mm and consists of aluminum material inside and outside the window and PVC material in the middle.

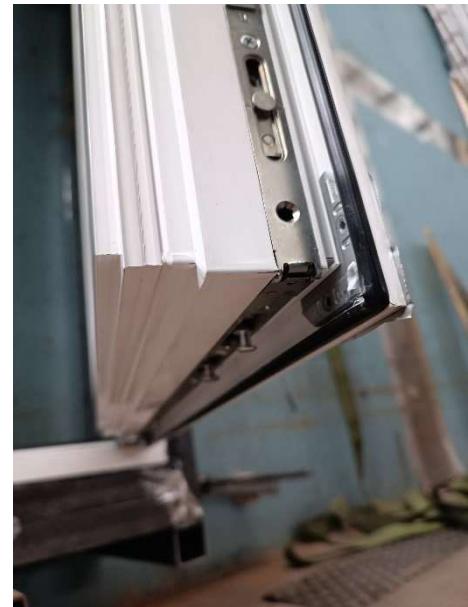

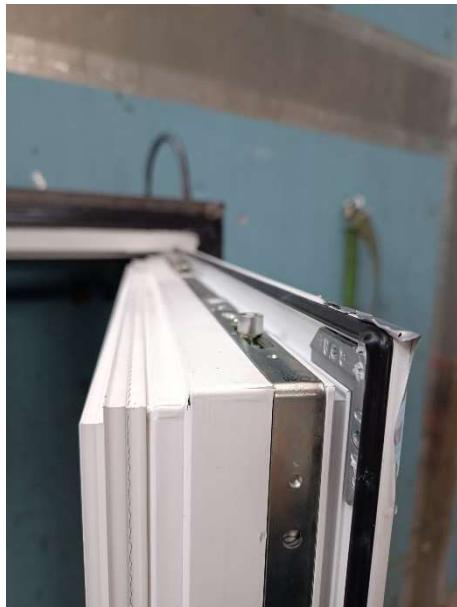

The sealing of the profile is done through three EPDM and PVC gaskets.

Accessories consist of Gretsch-Unitas mechanisms.

Further details of item characteristics, in annex "A".

**Item photograph**

(#) according to that stated by the customer, apart from characteristics specifically stated to be measurements; Istituto Giordano declines all responsibility for the information and data provided by the customer that may influence the results.

Apparatus

Description	In-house identification code
ISTITUTO GIORDANO computerized semiautomatic control and measurement system capable of performing all tests with the parameters requested by the normative references	EDI001
ISTITUTO GIORDANO pressure differential devices (orifice plates, nozzles and Venturi tubes) compliant with standards ASME MFC-14M:2003 "Measurement of fluid flow using small bore precision orifice meters", UNI EN ISO 5167-1:2004 "Misurazione della portata dei fluidi mediante dispositivi a pressione differenziale inseriti in condotti a sezione circolare piena - Parte 1: Principi e requisiti generali" ("Measurement of fluid flow by means of pressure differential devices inserted in circular cross-section conduits running full. General principles and requirements") e UNI EN ISO 5167-2:2004 "Misurazione della portata dei fluidi mediante dispositivi a pressione differenziale inseriti in condotti a sezione circolare piena - Parte 2: Diaframmi" ("Measurement of fluid flow by means of pressure differential devices inserted in circular cross-section conduits running full. Orifice plates")	EDI002a, EDI002b, EDI002c, EDI002d, EDI002e, EDI002f
ELEKTRONIK temperature and relative humidity transmitter	EDI018
DRUCK ambient absolute pressure transducer	EDI019a
SETRA SYSTEM differential pressure transducers	EDI024, EDI025
ASA flow meters with flow rate suitable for size of item	EDI008a

Description	In-house identification code
6 GEFRAN electronic displacement transducers	EDI017a, EDI017b, EDI017c, EDI017d, EDI017e, EDI017f
AEP Transducers 1 kN load cell with DFI reader	EDI104
MITUTOYO CORPORATION digital meter, full scale 5500 mm	FT364

For the calibration, compliance and identification of each individual piece of equipment (including service devices) refer to PP049 detailed internal procedure in its current revision at testing date.

Method

The test was carried out using PP049 detailed internal procedure in its current revision at testing date.

The item was tested under closed condition and with closed ventilation systems.

The item, conditioned for 4 h immediately prior to testing under the ambient conditions was fitted to the test rig and subjected in sequence to the activities reported in the following table.

Activity		Standard reference
verification for any parasitic leaks of the test chamber / test rig and identification of the positions of the points of item significant air infiltration		//
measurement of air permeability under positive and negative pressure		UNI EN 1026:2016
watertightness measurement		UNI EN 1027:2016
resistance to wind load	measurement of deflection under wind load with pressure P1	UNI EN 12211:2016
	verification of resistance to pulsating pressure P2	UNI EN 12211:2016
verification of air permeability under positive and negative pressure after pressure P1 and P2		UNI EN 1026:2016
resistance to wind load	safety check on item under extreme conditions with pressure P3	UNI EN 12211:2016
verification of the load-bearing capacity of safety devices		UNI EN 14609:2000

Notes for the correct reading of the results

For air permeability tests all figures refer to pressure of 101,3 kPa and temperature of 293 K.

For air permeability tests uncertainty considers contributions caused by measurement of the following quantities: air flow, test chamber pressure and size of item.

For wind load resistance test uncertainty considers contributions caused by measurement of the following quantities: test chamber pressure, net span of elements verified, frontal displacement.

Expanded uncertainty has been calculated using a coverage factor "k" of 2, corresponding to a confidence level of 95,45 %.

Environmental conditions

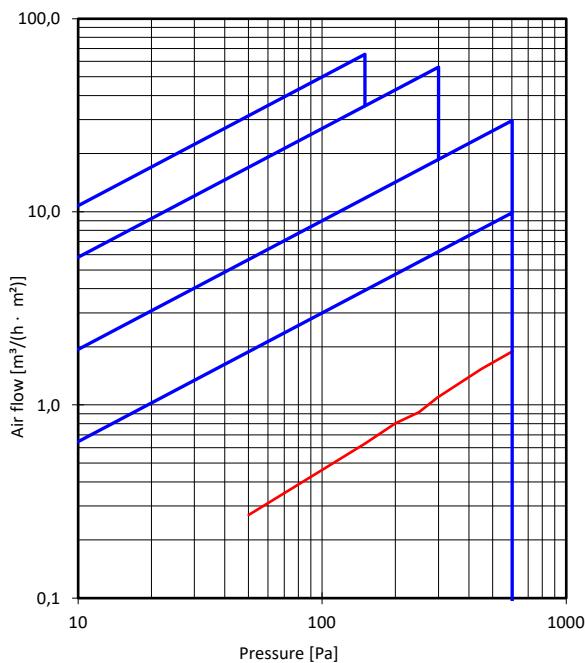

Atmospheric pressure	(1021 ± 10) hPa
Temperature	(18 ± 1) °C
Relative humidity	(60 ± 5) %

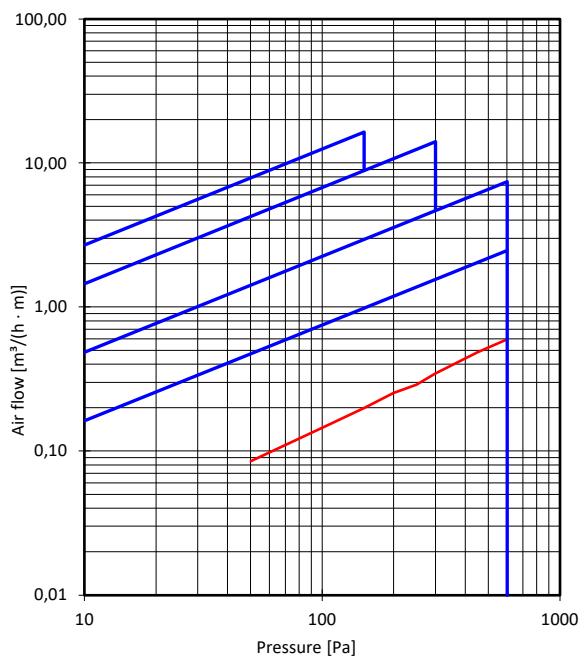

Results

Measurement of air permeability under positive pressure
