CERTIFICATE

Certified Passive House Component

Component-ID 1082wi03 valid until 31st December 2025

Passive House Institute

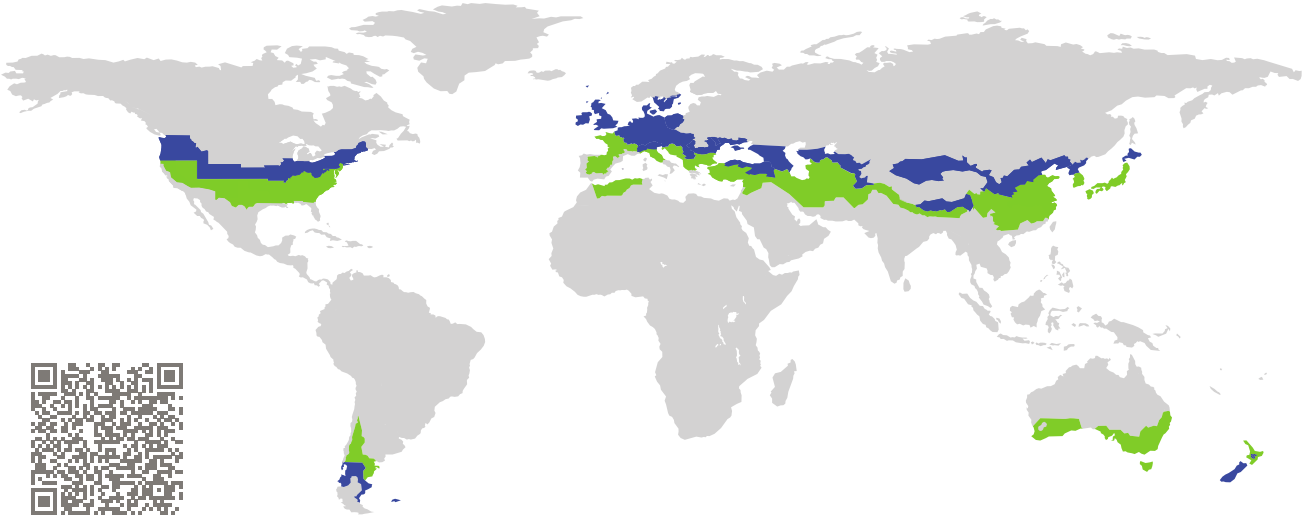
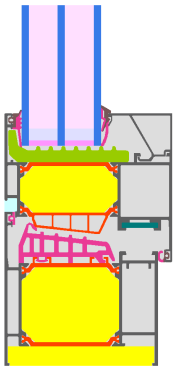
Germany



Category:	**Window Frame**
Manufacturer:	**Feal d.o.o., Siroki Brijeg, Bosnia and Herzegovina**
Product name:	**Termo 85 PA**

This certificate was awarded based on the following criteria for the cool, temperate climate zone



Comfort	U_W = 0.78	≤	0.80 W/(m² K)
	$U_{W,installed}$	≤	0.85 W/(m² K)
	with U_g	=	0.70 W/(m² K)
Hygiene	$f_{Rsi=0.25}$	≥	0.70

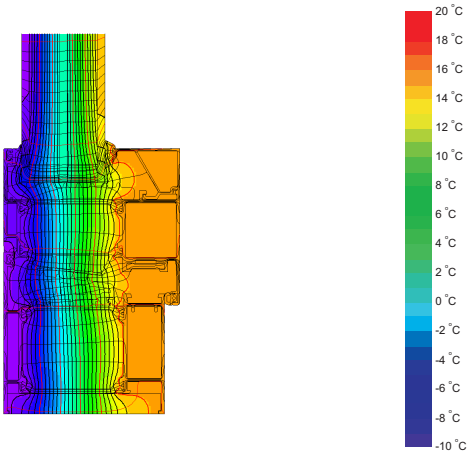
Calculation model



Isothermal

Description

Aluminium frame with thermal separation by Low lambda Polyamide and insulated by Kooltherm (0.022 W/(mK)) Pane thickness: 44 mm (4/16/4/16/4), rebate depth: 18 mm

Explanation

The window U-values were calculated for the test window size of 1.23 m × 1.48 m with U_g = 0.70 W/(m² K). If a higher quality glazing is used, the window U-values will improve as follows:

Glazing	U_g =	0.70	0.64	0.58	0.52	W/(m² K)
		↓	↓	↓	↓	
Window	U_W =	0.78	0.74	0.70	0.67	W/(m² K)

Transparent building components are classified into efficiency classes depending on the heat losses through the opaque part. The frame U-Values, frame widths, thermal bridges at the glazing edge, and the glazing edge lengths are included in these heat losses. A more detailed report of the calculations performed in the context of certification is available from the manufacturer.

The Passive House Institute has defined international component criteria for seven climate zones. In principle, components which have been certified for climate zones with higher requirements may also be used in climates with less stringent requirements. In a particular climate zone it may make sense to use a component of a higher thermal quality which has been certified for a climate zone with more stringent requirements.
