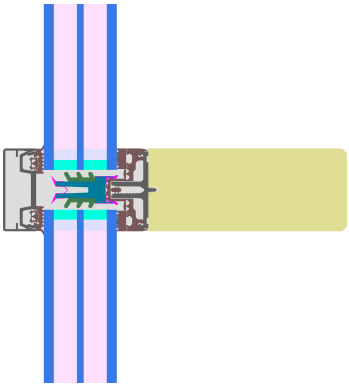
Category:	**Curtain Wall**
Manufacturer:	**SCHÜCO International KG, Bielefeld, Germany**
Product name:	**AOC 50 TI**

This certificate was awarded based on the following criteria for the cool, temperate climate zone



Comfort	U_{CW} = 0.80	≤	0.80 W/(m² K)
	$U_{CW,installed}$	≤	0.85 W/(m² K)
	with U_g	=	0.70 W/(m² K)
Hygiene	$f_{Rsi=0.25}$	≥	0.70

Calculation model | Isothermal

Description

wood curtain wall; reduction of radiation losses by way of blank aluminium pressure plate; insulator made from XPET, PE and PE-foam Pane thickness: 44 mm (6/14/4/14/6), rebate depth: 13 mm. Spacer: SWISSPACER Ultimate with butyl as secondary seal.

Explanation

The element U-values were calculated for the test element size of 1.20 m × 2.50 m with U_g = 0.70 W/(m² K). If a higher quality glazing is used, the element U-values will improve as follows:

Glazing	U_g =	0.70	0.68	0.56	0.52	W/(m² K)
		↓	↓	↓	↓	
Element	U_{CW}	0.80	0.79	0.67	0.64	W/(m² K)

Transparent building components are sorted into efficiency classes depending on the heat losses through the opaque part. The frame U-Values, frame widths, thermal bridges at the glazing edge and the glazing edge lengths are included in these heat losses. A more detailed report of the calculations performed in the context of certification is available from the manufacturer.

The Passive House Institute has defined international component criteria for seven climate zones. In principle, components that have been certified for climate zones with higher thermal requirements may also be used in climates with less stringent requirements. In a particular climate zone it may make sense to use a component of a higher thermal quality which has been certified for a climate zone with more stringent requirements.
